

The Student Water Project

PICTURE BOOK

Call for submissions

The Student Water Project is collecting imaginative responses to water-themed questions from elementary students and turning them into a student designed picture book!

ALL PROFITS WILL
GO TOWARDS OUR
CLEAN WATER
INITIATIVES in Kisii
Kenya

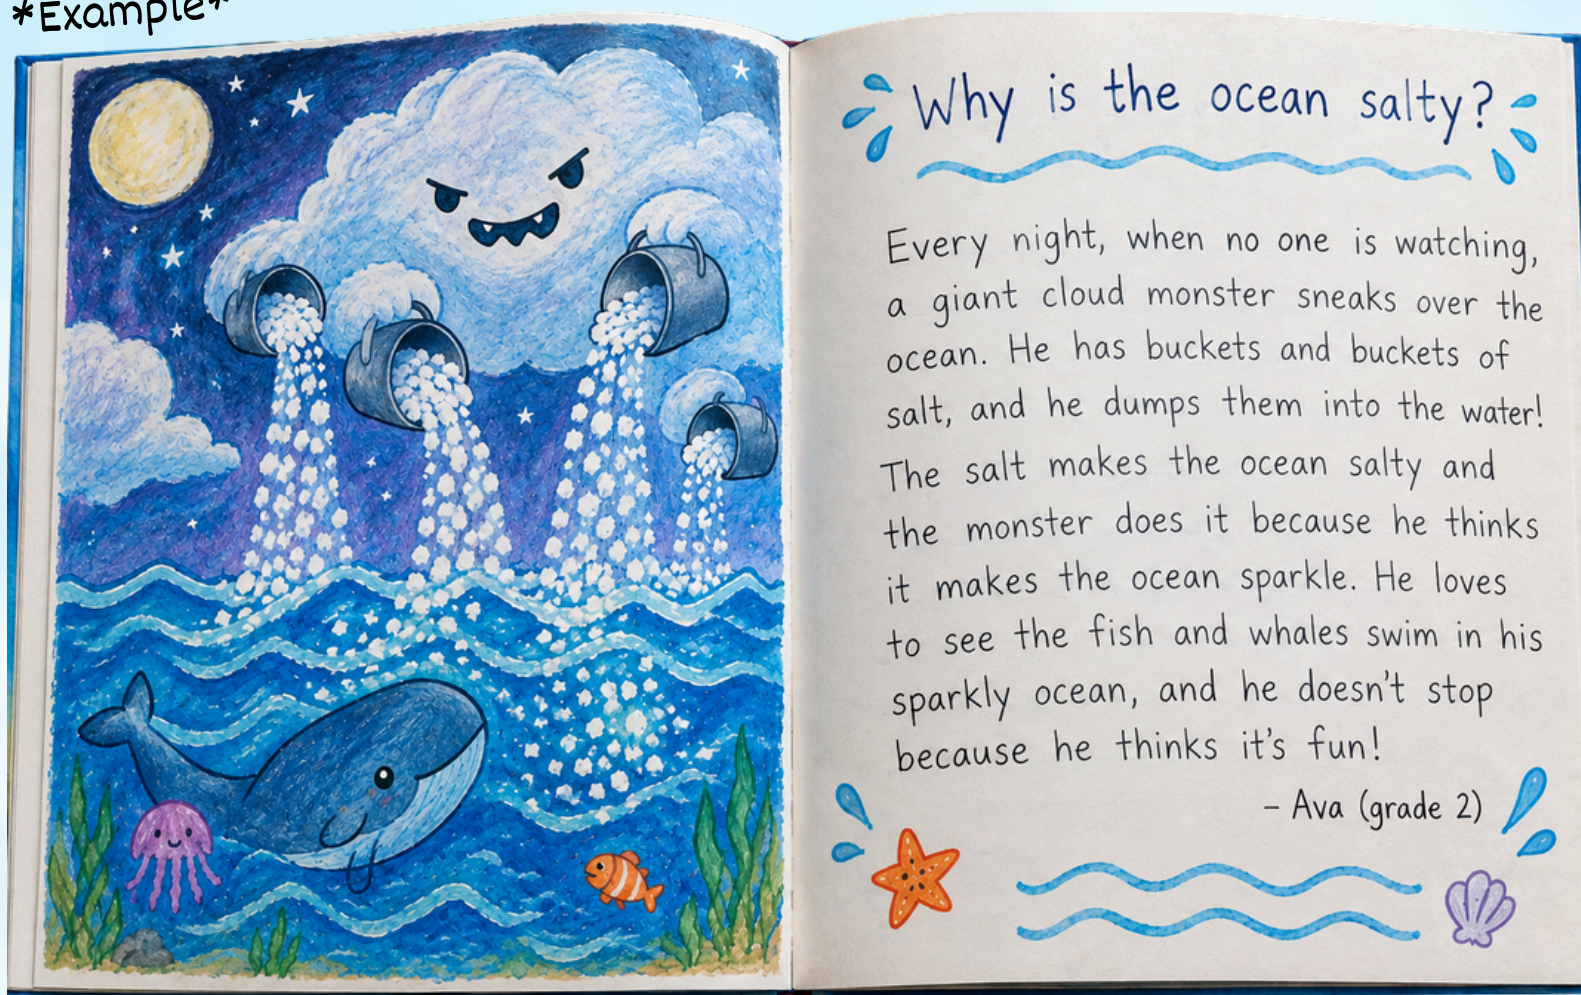

Elementary-aged students will answer, water-themed questions that encourage them to use their imagination. There are no limits to how they can answer. We want to hear funny, imaginative, unique, and unexpected ideas, whether they're silly, thoughtful, or completely made up!

Students will write down their answers and submit their original water-themed stories or ideas through our Google Form. A parent or legal guardian must agree to the submission terms before the story can be included in the book. TSWP will review the submissions and select approximately 10-15 creative and imaginative responses to be featured in the picture book.

Once the stories are selected, our student illustration team will bring each idea to life through original illustrations. Once the book is complete, the book will be available for purchase around the holiday season, primarily online, with opportunities to share and sell it through libraries, bookstores, community events, and holiday pop-ups.

PROMPTS

The top imaginative responses will be featured in our brand-new story book!

Oceans:

Why is the ocean salty?
Why do oceans never run out of water?
Why is the bottom of the ocean so dark?
Why do seashells sound like the ocean?
What is hiding at the bottom of the ocean?

Rivers, Lakes and waterfalls:

How did lakes get their shapes?
Why are some lakes perfectly still?
Where does a river think it is going?
What lives in a river that humans have never discovered?

Rain and clouds:

How do raindrops get their shape?
How do clouds decide when it is time to rain?
Who paints rainbows after it rains?
Why do clouds carry water?

Snow and ice:

Who designs every snowflake?
Why do no two snowflakes look exactly alike?
What would happen if ice sank instead of floated?
What does a glacier remember from thousands of years ago?

Other:

What if you could ride a raindrop?
What if a tiny ocean was inside of every puddle?
What happens if a raindrop doesn't want to fall?

Why is the ocean salty?

Every night, when no one is watching, a giant cloud monster sneaks over the ocean. He has buckets and buckets of salt, and he dumps them into the water! The salt makes the ocean salty and the monster does it because he thinks it makes the ocean sparkle. He loves to see the fish and whales swim in his sparkly ocean, and he doesn't stop because he thinks it's fun!

– Ava (grade 2)
